

Automation Testing Practice - Test Analysis Report

Project Name

Automation Testing Practice Framework

Objective

To automate the functional testing of the Automation Testing Practice website using Selenium WebDriver, Java, TestNG, Maven, Jenkins, Page Object Model (POM), and Extent Reports.

Test Execution Summary

Total Test Cases: 14

Executed Test Cases: 14

Passed Test Cases: 14

Failed Test Cases: 0

Blocked Test Cases: 0

Pass Percentage: 100.00%

Fail Percentage: 0%

Module-wise Execution Status

Module	Status
Name Validation & Data Entry	3/3 Passed
Radio Buttons, Checkboxes & Dropdown Handling	1/1 Passed
File Upload (Single & Multiple Files)	1/1 Passed
Pagination Web Table	1/1 Passed
Forms & Date Picker Validation	3/3 Passed
Search & External Link Validation	1/1 Passed
Dynamic Button Handling	1/1 Passed
Alert Handling (Simple, Confirmation & Prompt Alerts)	1/1 Passed

Window & Tab Handling	1/1 Passed
Mouse Hover Operations	1/1 Passed
Drag and Drop Functionality	1/1 Passed
Broken Links Validation	1/1 Passed

Functional Validation Performed

- Form Validation
- Date Picker Validation
- Phone Number Validation
- Alert Handling
- Multiple Windows & Tabs
- Web Table Validation
- Mouse Actions
- File Upload Validation
- Link Verification

Extent Report Analysis

The Extent Report dashboard provides a comprehensive overview of the execution results for the Automation Testing Practice Website Automation Framework. It presents detailed execution information, including test start and end times, execution status, visual statistics, execution timelines, and environment configuration details. The report indicates that a total of 14 automated test cases were executed, with 14 test cases passing and 0 test cases failing, resulting in an overall pass percentage of 100.00%.

The report also provides a detailed breakdown of each executed test case, covering functionalities such as Form Validation, Date Picker Validation, Radio Button and Checkbox Handling, Dropdown Operations, Alert Handling, Multiple Windows and Tabs, Web Table Validation, Mouse Actions (Hover, Double Click, Drag and Drop, Slider), File Upload Validation, and Link Verification. Each test case is displayed with its execution status, execution time, timestamp, and detailed logs, enabling easy identification of successful executions and defect-related failures.

TestNG Report Analysis

The TestNG execution report showed 14 executed test cases, 14 passed and 0 failed. No test cases were blocked.

Conclusion

The automation framework successfully validated major functionalities of the application. The identified defects highlight areas requiring improvement in validation, usability, accessibility, and file handling.
